Our products

Modern Identity Management - Authinity

We searched for an SSO and identity management solution that would meet the varying compliance needs of our clients. It didn't exist. So we built one.

Secure

Two factor authentication, encryption, password blacklists, and more. You can rely on Authinity to protect the security of your users and data.

Flexible

Customise the look, feel, and security policy of Authinity to suit your organisation. Integrate it easily via the OpenID Connect protocol.

AVCO PAYROLL — Payroll

Avco's Payroll services allow your business to eliminate the difficulties involved in payroll filing.

Bureau

Avco Payroll Bureau service helps with file conversion and transfers, whether for year-end returns or file exchanges with HMRC throughout the year.

EDI

Avco Payroll EDI provides a simple and secure route for all your standard submissions to and from your payroll system.

A2C services — Avco A2C Services

Transport

Avco Transport provides secure transfer of A2C data to the majority of JCQ awarding organisations. It does so with unbeaten levels of performance and reliability.

Data Standards

Avco's Data Standards Service handles the technical burden of the new data model while maintaining the business benefits.

Consulting & Bespoke Services

Our long and involved history with A2C makes us the go-to choice for A2C consultation and bespoke development services.

Secure File Transfer

Avco has a strong reputation and a long history of providing high-quality secure file transfer services.

Our expertise in data security and commitment to customer satisfaction has benefitted hundreds of schools, local authorities and other organisations.

The current product suite, consisting of AnyComms Plus and SFX, covers a broad range of use cases and scenarios.

AVCOSFX — SFX

Simple, straightforward, and easy to use file transfer within your organisation and with third parties. It's time to stop sending data by email.
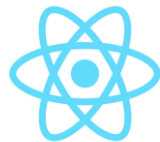

anycomms+ — AnyComms Plus

Powerful, flexible and customisable tools such as questionnaires and automated file broadcasts. Anycomms Plus is full-featured and infinitely capable.

Our tech stack; this is the tip of the iceberg

Software Engineer

What you can expect as a developer at Avco

Work on the full development lifecycle from requirements, through implementation, to delivery and maintenance.

Work with some of the largest businesses in the UK, Europe and America.

Grow your existing skill set, experiment and work with new tools, techniques and technologies.

Help shape and improve the processes and practices of a growing development team.

Skills required:

- Java or C# in addition to HTML, CSS, and JavaScript

- SQL/MySQL and basic database administration skills

- Unit testing

- Source control (Git is preferred, but experience of any other system would be acceptable)

- Formal qualifications are expected, but not essential
